

Zomato Customer Analytics Case Study

Zomato is one of India's largest food delivery platforms, connecting millions of customers with restaurants across multiple cities.

Over the last few months, the leadership team has observed that while the number of registered customers continues to grow, overall business performance is not improving at the expected rate. Revenue growth has become inconsistent, customer retention appears to be declining, and certain restaurant partners are underperforming.

The management team has hired a Data Analyst to investigate the business and answer critical questions that can help improve growth, customer retention, and operational efficiency.

As a Data Analyst, your objective is to analyze customer, restaurant, and order data to uncover actionable insights and provide data-driven recommendations.

Revenue Analysis,
Customer Analysis
Restaurant Performance
Coupon Analysis
Cancellation & Refund Analysis
Customer Churn Analysis

Revenue Analysis

1. What is the total revenue?
2. What is the monthly revenue trend?
3. Which city contributes the highest revenue?
4. Which payment mode generates the most revenue?
